

S04.01 Vector Databases

We bid farewell to MongoDB

And dive into Vector stores

NLP the basics

To build the context

from text to vectors

Embeddings

- why do we need embeddings
- what are embeddings
- how to generate embeddings

Storing embeddings

Embeddings and vector search in SQL and NoSQL databases

Why do we need a specific type of database for embeddings ?

Demo with weaviate

Given a dataset with textual significance

- generate embeddings
- import into database

Hands on work: build search engine

Choose how to create embeddings

and build a lightweight search engine (streamlit)
